

Resampling order 20 of a flat onto a regular x grid (Gaussian kernel, FWHM 0.5 detector px)

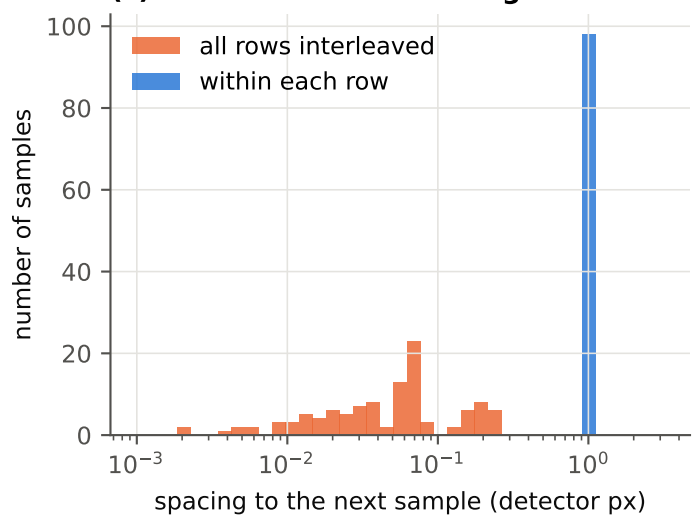

(a) Order 20 on the detector: 15 rows per column, curved trace

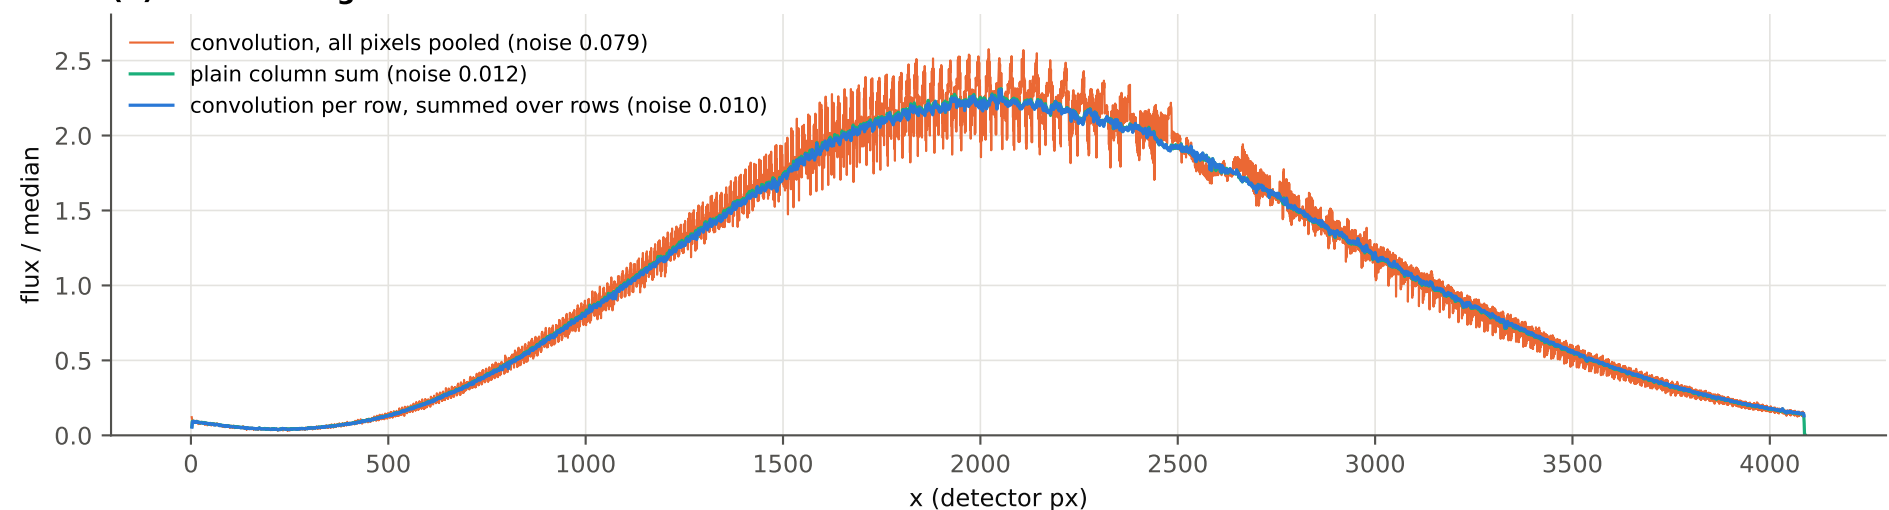

(b) Pixels are not one function of x

(c) Cell widths set the weights

(d) Profile along the order

(e) Zoom on 120 px, per-row profile with its propagated 1-sigma envelope
